## Configuration Process

---

### User Registration

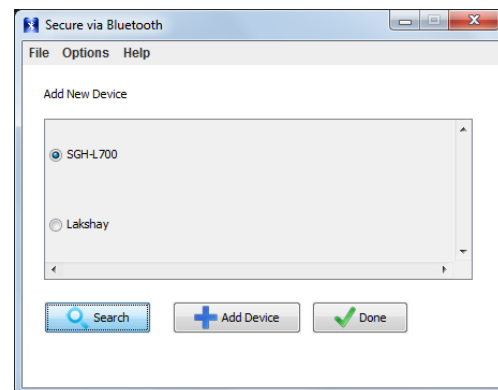

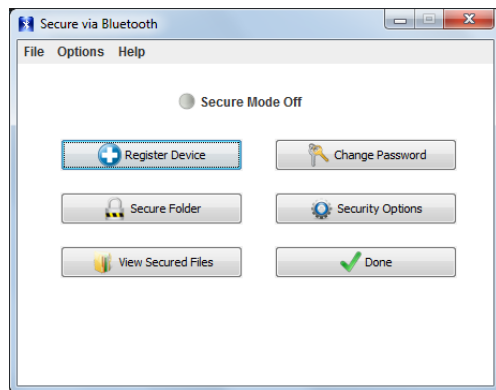

- Register yourself by adding username and password.
- Click Submit button.

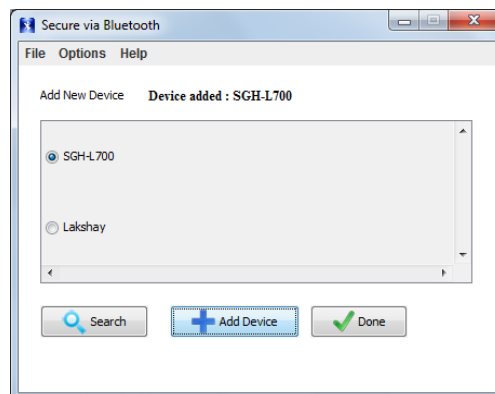

## Device Registration

Register your Bluetooth Device.

➤ Go to Register Device -> Search.

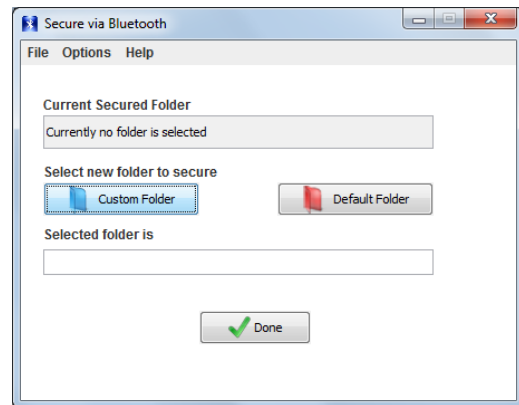

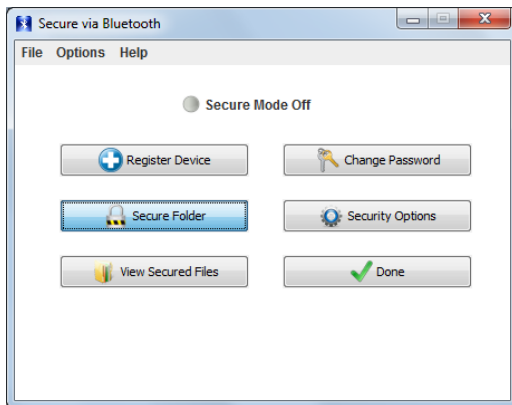

➤ After selecting the desired device click Add Device option.

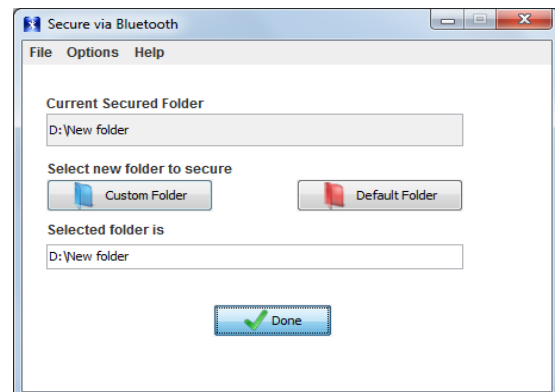

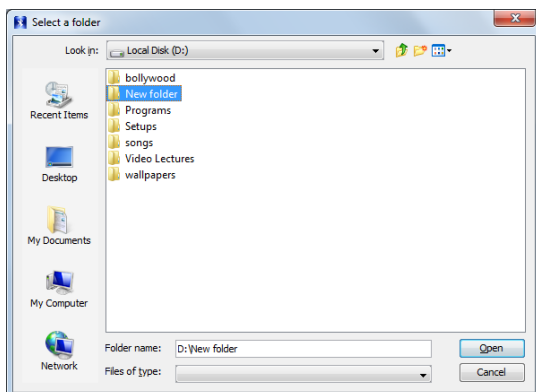

## Choose Secure Folder

Next step is choosing the folder to be secured.

➤ Go to Secure Folder -> [Custom Folder/Default Folder](#).

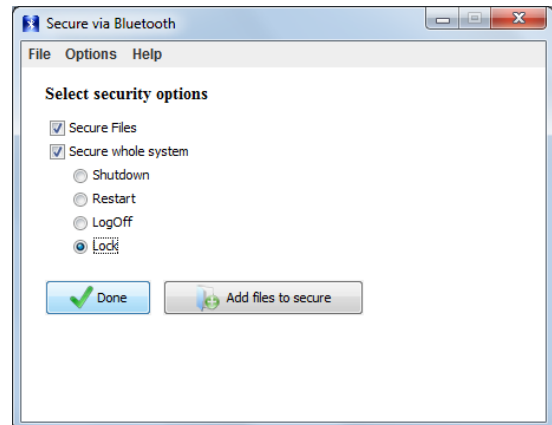

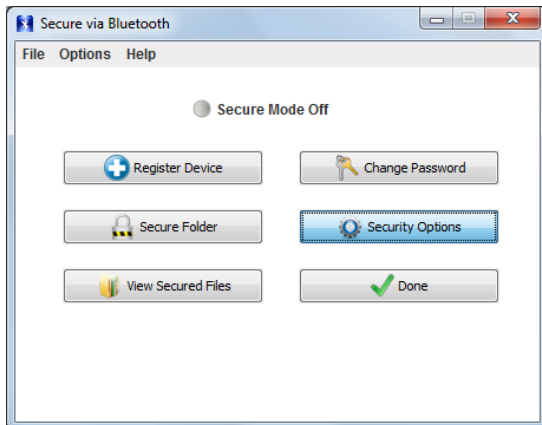

➤ Browse through the folder you want to be secured.

## Security Options

- Users can choose the way in which they want to implement the security.
- Go to Security Options.
- Choose from various security options according to your convenience.

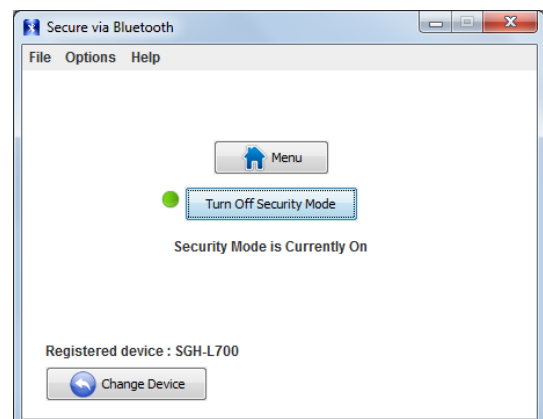

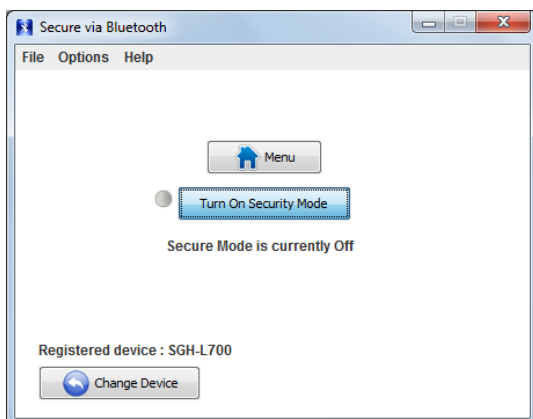

Users can either choose [Secure Files](#) or [Secure Whole System](#)

## Switch Security Mode

After choosing the Security Options the main step is to Turn On Security Mode.

- Click on [Turn On Security Mode](#) button.

This completes the configuration process.

## Featured Components

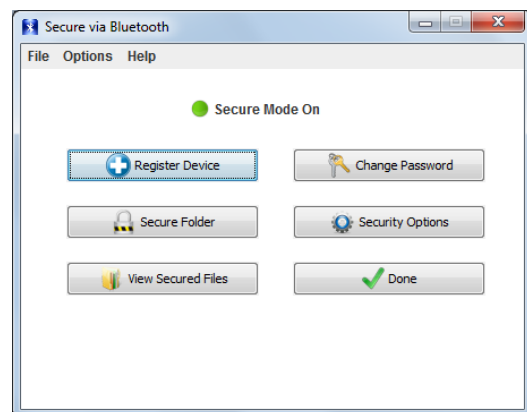

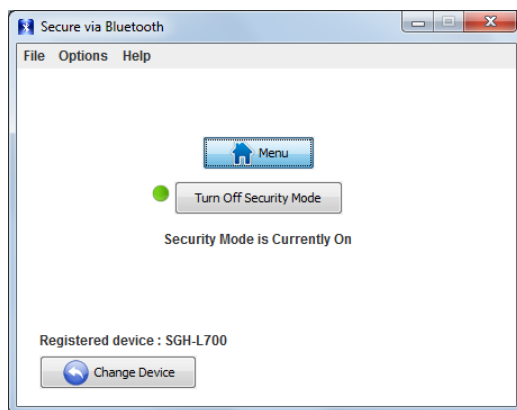

---

### Menu

Takes the users to menu.

Here the users are allowed to access the following options.

- Register Device
- Change Password
- Secure Folder
- Security Options
- View Secured Files

### Turn On Security Mode

Switches On the **Security Mode**. When in this state the application's background process functions.

In this scenario, if the Bluetooth device is turned on the secured files and folders would be visible to the users and if the Bluetooth device is turned off the application automatically hides the secured files and folders.

Pressing again on this option Switches Off the Security Mode. When in this state the application's background process does not functions. In this scenario, turning on or off the Bluetooth device does not affect the device settings.

### Change Device

Enables the users to change the registered device. The application would search for the Bluetooth devices that are in range. The users can then select any one device that are shown in the list.

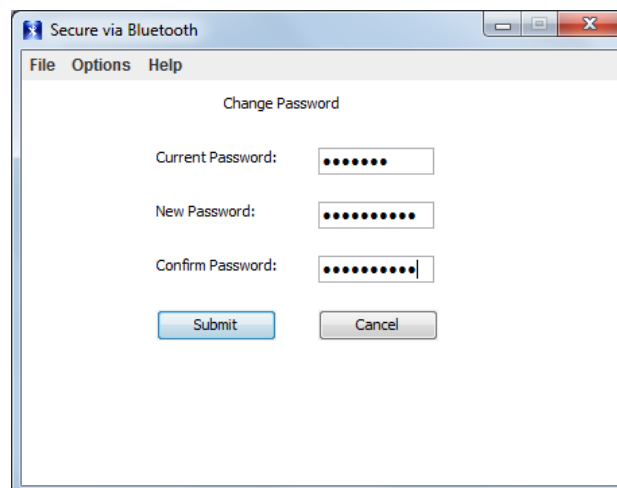

## Register Device

Helps the user to register a new Bluetooth Device.

The user uses the selected Bluetooth device to operate the application.

## Change Password

Enables the user to change the password. Here the user has to first enter the old password and then the new password.

## Secure Folder

Helps the user to select the intended folder that they want to secure using the application.

Users can either select the Custom Folder way or Default Folder way.

### Custom Folder

Through this option the user can select or create a folder in which the secured files and folders would be placed.

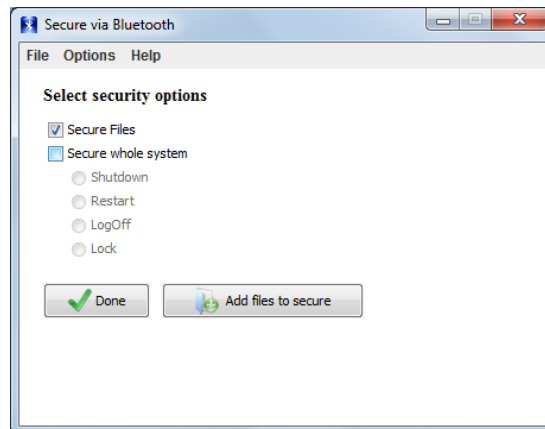

### Default Folder

Through this option the folder to be secured is automatically selected by the application and is always the same default folder.

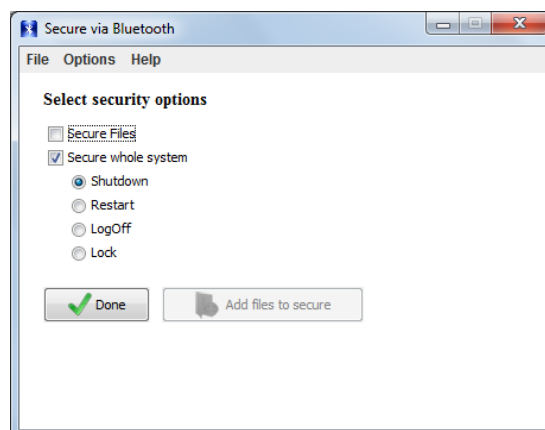

## Security Options

Allows the user to choose from the given security options available.

**Secure Files** option hides the selected files and folders when the registered Bluetooth device is either **out of range** or when the **device's Bluetooth is off**.

**Secure Whole System** gives the user options to turn off , restart or lock the system when the registered Bluetooth device is either **out of range** or when the **device's Bluetooth is off**. User can select any one of the three given options.

## View Secured Folders

Enables the user to explicitly view the hidden files and folders. This option takes the user to the location where secured files and folders are placed.

## Important Points

---

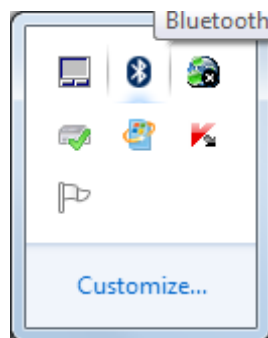

- Always switch on your Bluetooth device before jumping to the Register Device option.
- Put all your files in a separate folder to use the Custom Folder option.
- Always close the application window after configuring the settings.
- Install JDK on your system if not already installed. You can also install JDK from the bundle given along the application package.

## Turn on Computer's Bluetooth

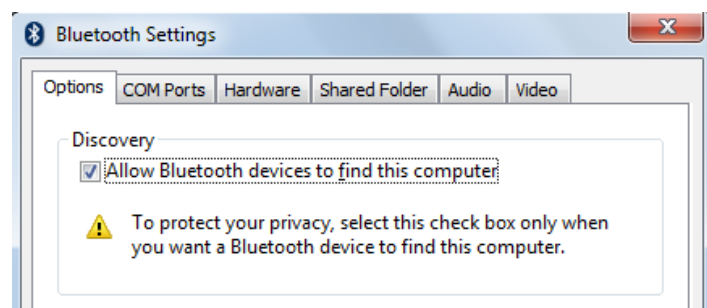

---

To enable the Bluetooth of your system follow the steps as given below:

- On the taskbar click Show Hidden Icons option. A small pop window appears as shown below.

- Right click the Bluetooth icon and select **Open Settings** option.
- In the new window check the checkbox as shown below.
